EDITORS: Please do not use "Pacific Gas and Electric" or "PG&E" when referring to PG&E Corporation or its subsidiary, PG&E National Energy Group, Inc. PG&E National Energy Group is not the same company as Pacific Gas and Electric Company, the utility, and is not regulated by the California Public Utilities Commission. Customers of Pacific Gas and Electric Company do not have to buy products or services from PG&E National Energy Group in order to continue to receive quality regulated services from Pacific Gas and Electric Company.

NATIONAL ENERGY & GAS TRANSMISSION, INC.
AS NEW COMPANY NAME**

**Action for Entity Formerly Known as PG&E National Energy Group, Inc. Taken as Part of
Planned Separation from PG&E Corporation**

BETHESDA, Md – National Energy & Gas Transmission, Inc. (NEG T) announced today that the U.S Bankruptcy Court for the District of Maryland has authorized this new company name. Formerly known as PG&E National Energy Group, the change reflects NEG T's pending separation from its parent, PG&E Corporation (NYSE: PCG).

While the change is immediate and the company is now phasing in the new name, NEG T will not become legally separated from PG&E Corporation until NEG T emerges from bankruptcy and its Plan of Reorganization (POR) is effective. If implemented, PG&E Corporation's equity interest in NEG T would be eliminated.

The company's subsidiaries also have changed their names to delete references to PG&E. The new names include Gas Transmission Northwest Corporation (formerly PG&E Gas Transmission, Northwest Corporation), which is not in bankruptcy.

The company's other major subsidiary, USGen New England, Inc. did not change its name. USGenNE filed Chapter 11 in July and its case is being separately administered.

Headquartered in Bethesda, Md, NEG T voluntarily filed for Chapter 11 on July 8, 2003, as part of its ongoing restructuring efforts. The company has more than 7,300 megawatts of generation including a mix of natural gas, coal/oil, hydroelectric, waste coal and wind power at numerous facilities across the country. With more than 1,350 miles of gas pipelines, the company's Pacific Northwest system has the ability to transport 2.9 million cubic feet of natural gas per day from cost-competitive abundant supplies in Western Canada to markets in California, Nevada and the Pacific
